

# WATER FRONT NEWS

A partial exodus among the vessels in the harbor occurred yesterday and the cable also brought reports of a number of ships that arrived at Honolulu from the Coast. The transport ship was the first to get away from the pier and started for Seattle shortly before noon. The American Hawk, a lighter Alaskan, departed for Kailua, and was followed by the Mauna Kea for Japanese ports. Upon her arrival in Seattle numerous reports will be made to the P. O. and it is expected her efficiency as a stock transport will be in the hands of the construction for several months. When next coming to the islands she will have a new quartermaster.

The Mauna Kea completed yesterday the discharge of 4000 tons of nitrate which she brought from the South American nitrate ports. She cleared for Japan ports.

The Sierra, Wilhelmmina and Makura all arrived at their respective destinations.

Secrets of a fresh, healthy, satiny complexion, and what satisfaction and peace of mind its possession brings. The hues of age, worry and overwork are rendered well high powers by Mrs. HARRISON'S LILA MONTEZ CREME. A wonderful sealer, healer and protector to a dry, cracked or chapped skin. It is the completion of its remarkable power by a chain of a free sample and book "SECRET OF BEAUTY AND GOOD HEALTH" and

## RUSSIANS APPEAL TO PRESIDENT TAFT

(Continued from Page One.)

They will hint to the Governor that if all else fails he has a contingent fund that may be called upon.

## One Death in Camp.

For the third time during the several incident-ridden months that the Russians at Iwilei have resided in Hawaii, diphtheria has broken out and the first fatality occurred yesterday when the twelve-year-old son of Maxim Sacharoff died. The dead boy's little sister is now sick and together with her the Zacharoff family have been removed by the Territorial health authorities to the Kailua detention hospital.

## Officers of San Gabriel.

The officers of the Portuguese warship San Gabriel, which is due here about May 10, are as follows: Commander, Antonio Jovis; Althouguia, Ferreira Pinto Basto; Lieutenant Commander, Benjamin de Paiva Curado; Captain, Antonio Gomes Branco Martins; First Lieutenants, Jose Luiz Teixeira Martins, Fernando Vasconcellos de Sa Pereira, Jose Meyrelles Garrido and Amador M. Guimaraes.

## A LIFE SAVER.

"I saved me," or "I saved the life of my child," are the expressions you hear every day about Chamberlain's Colic, Cholera and Diarrhoea Remedy. This is true the world over where this valuable remedy has been introduced. No other medicine in use for diarrhoea or bowel complaints has received such general approval. The secret of the success of Chamberlain's Colic, Cholera and Diarrhoea Remedy is that it cures.

The chance of a Louisville girl has been spending the winter in Florida in connection with his father's business interests in that quarter. "Marie," said the girl to a friend the other day, "Walter has just sent me the dearest little alligator from Florida." "Dear me!" replied Marie, with affected enthusiasm. "And how shall you keep him?" "I'm not quite certain," was the reply. "But I've put him in Florida water till I can hear further from Walter." — Harper's Weekly.

## Nature's Mysteries

Los Angeles Times.

One is divided in mind whether to read this article as above or to call it Man's Colossal Ignorance. According to the best scientific opinion it is not less than 10,000 years since man, a rational being, using articulate speech and thinking in syllogisms, appeared upon the earth.

Before sunrise these mornings watchers are scanning the eastern skies for a glimpse of the famous Halley's comet, which returns to visit us after a period of seventy-five years. It is more than half a century since a notable planet appeared in our skies here before, and when Donati's great light flamed for nights through the western sky covering half a hemisphere in 1858, it was even then an object of terror to a great many people even in our own enlightened country.

We know too much about comets to imagine that they are providential portents. Since Halley's time we have learned a good many of their laws and understand some little thing about comets. We know, for example, that they circulate around the sun passing through our solar system in an orbit either in the form of an ellipse or of a parabola. Those that travel in a parabola come rushing down the skies and swing around our sun, to pass out on its other side far into space and never to return. Our planetary system all travels around the sun in orbits which are elliptical, but the cometic ellipses are much flatter than those of the earth or the other planets. The one in the sky now takes seventy-five years to make its circuit around the sun. The ellipse has two fixed central points instead of the one and center of a perfect circle, and these are called the foci of the ellipse. The cometic orbit has one focus very close to the sun and the other far away in space. The movement of the comet is not uniform in its pace throughout the whole of its course. The farther from the sun the slower its progress, and as this diaphanous body rushes down the sky toward the center of our system at a speed that defies the imagination of man to conceive of what it is. This is in exact conformity to the law of the planets, including our own earth, which at its apogee goes slowly and accelerates its pace as it approaches its perigee. The reason for this is to nicely balance the centrifugal and centripetal forces, for if the earth moved as slowly at its perigee as at its apogee, it would be drawn into the sun and destroyed, whereas if it moved as rapidly at its apogee as at its perigee, it would fly off into space and be lost in a different way, perishing from cold in the one case as it would from heat in the other.

We do not even know what a comet is composed of. Its tenuity, its lack of substantiality, is one of the greatest puzzles about it. This one in the sky now at some near day will pass directly between our earth and the sun, but it will not cast any more shadow than the atmosphere of our earth. The sun light will glow not only through its tail, but through the nucleus of the comet. As it comes down the skies toward us, at first there seems to be no comet, but as it approaches the sun this body out of us if it were some great bird from the unknown, that sprouted and grew its tail feathers.

We know the earth is bound to the sun because of the density of the two bodies. It is the attraction of matter to matter, combined with the revolution of the earth around the sun, that holds the planet in its orbit to its center. But what is the force that holds Halley's comet in its elliptical course around the sun? There is not substance enough in it to account for this according to the laws of gravitation, and why does it come from the regions of sunless space into our system, tailless, to glow this immense flaming tail behind it as it comes nearer the sun? By what law is its speed accelerated as it approaches the center of our system in order to prevent it from falling into the sun and being destroyed and what is the force that turns it around its far away focus and sends it back after a period of seventy years? If we were to take that comet speed of the light, if this comet through space and multiply it by the number of years at its perigee, what an inconceivable distance it travels! But that space away beyond the most distant of our regular planets, look Donati's comet, how many of its

## SPLITTING HEADACHES

### THIS REDWOOD CITY WOMAN FEARED INSANITY.

#### Trouble Entirely Cured When the Weak Nerves Were Toned up by Dr. Williams' Pink Pills.

If every pale, weak, nervous woman who reads these lines would try the remedy that cured Mrs. Stothers, there would be less suffering, fewer children born to a heritage of weak nerves, fewer unhappy homes.

Weak nerves mean irritability, hysteria, headaches, melancholia, perhaps insanity. Build up the nerves by using Dr. Williams' Pink Pills, at the same time toning up the general health and you will see an increasing appetite, a happier disposition, a lighter step, freedom from lassitude, a return to sound and refreshing sleep.

The case of Mrs. R. Stothers, of No. 200, Beach street, Redwood City, Cal., should encourage every nervous sufferer to try this blood and nerve tonic. She says:

"I was troubled with nervousness for about two years and the last year became so much worse that I was completely run down, was pale and thin and could get hardly any sleep. I was always seeing imaginary things before my eyes. When ever my child cried or there was any noise, I would get so nervous that I could hardly stand it. I had splitting headaches and at times thought I would go insane."

"I had been quite sick for several months before I heard of Dr. Williams' Pink Pills. The druggist told my husband to have me try them and after a short trial I felt much better. The pills gave me color and built me up. I gave them to a good trial and was entirely cured."

If you are interested in the treatment of nervous troubles with Dr. Williams' Pink Pills, send for our free booklet, "Diseases of the Nervous System." It shows what the pills have accomplished in many recent cases of neuritis, sciatica, St. Vitus' dance, nervous headache, nervous dyspepsia, neuralgia, paralysis and locomotor ataxia.

Dr. Williams' Pink Pills are sold by all druggists, or will be sent, postpaid, on receipt of price, 60 cents per box, six boxes for \$2.50, by the Dr. Williams' Medicine Company, chemist, N. Y. 200.

Suggestions given for simplifying or systematizing office work. All business confidential.

thousand years to make the circuit of its orbit.

And if the human mind with the aid of algebra could reach out and comprehend what such a distance means as the remotest flight of Halley's comet reaches, and if going far beyond that limit we could reach even by the flight of our imagination the almost limitless remoteness of the farthest point in the curve in which Donati's comet turns, we would still be only at the first letter in the great alphabet that must be used to spell the word infinity.

Take another fact in nature, the electric current, and here the human mind has made vast conquests over the mysteries of nature since our savage ancestors looked upon the lightning as a thunderbolt hurled directly from the hand of mighty Jove, or even since the time when Franklin sent up his kite and caught the electric spark upon his knuckles from the end of his door key. We know no more about the nature of the electric current than Franklin did, and he knew no more than he who looked upon it as a bolt cast by the hand of the anthropomorphic god of the Greeks from Mount Olympus. We know that our own earth is permeated through and through with this force. It is found in the dead amorphous rock. It fills every globe of water in the ocean. Without it there could be no life, no food could burst, no blade could grow, no sentient being could breathe, no mind could think, no soul could aspire. But what it is, whence it draws its supplies, its hidden laws and its essential nature are as unknown to the most advanced scientist of our day as to the savage of a thousand years ago.

Men have lived in this world 10,000 years, and have learned so much about the mysteries of their home, and yet know so comparatively little, are so far away from a fundamental understanding of anything about it or themselves, that surely the contemplation of the world's many mysteries and of our inability to fathom them should naturally create in the mind of a thoughtful man the impression that rind the spirit of Abraham Lincoln during all the hours of his mature life. His biographers tell us that Lincoln's favorite lesson was the one beginning with the line "To be, that should the spirit of mortal be proud?" Abraham Lincoln was in many ways a peculiar member of the human race. Most of us are more like the king of old who wanted to know "To be, that should the spirit of mortal be proud?" "When we think how many a peculiar member of the human race, most of us are more like the king of old who wanted to know "To be, that should the spirit of mortal be proud?" "When we think how many a peculiar member of the human race, most of us are more like the king of old who wanted to know "To be, that should the spirit of mortal be proud?"
